

NEW COLLECTION OF HANDLES

Michał
Roszkowski
designer

”

The role and obvious duty of a designer is to question existing solutions. It is about constant verification and asking the questions “why?”. About discovering fresh and innovative ideas, though respecting the functional requirements and technological constraints. The place to look for these innovations when designing rail handle were proportions, finishing and textures as well as composition. The wide choice coming from selection of feet shapes, both plain and textured rods and a couple of colour variants — within the available program one can easily find perfect match to each furniture piece. Regardless of its styling but still keeping the overall features of elegance and fine-tuned details.

”

”

The TORN Collection is clearly an unusual proposal. Driven from the attempt to use the simplest expression forms to deliver coherent result. Coherent, yet intriguing and unusual. The Solution that focuses the user's attention on compositions, components, visual relations and uncommon material application.
